GASTON SOLIZ
Full Stack Developer

Argentina, Buenos Aires | +5491165892471 | gaston.e.soliz@gmail.com
[Linkedin](#) - [GitHub](#) - [Portfolio](#)

I'm a Full Stack Developer with experience on diverse web application projects, both individual and group. This challenge allows me to grow fundamental skills like responsibility, adaptability, teamwork and effective communication.

My specialization focuses on the Front-end although i have solid knowledge that enables me to carry a Back-end development. I'm familiar with agile methodologies like SCRUM, I'm proficient in using git, my knowledge reaches to data structure and algorithms.

I count on create responsive design in CSS, in the React.js field i stand out my skills on the component design, as well as the effective state management using Redux. Also, I have experience in server's creation through Node.js and Express, with a solid database management using Sequelize, also doing queries in PostgreSQL, MySQL and SQLite.

I distinguish myself for my efficiency, creativity, problem solving ability and organization.

PROJECTS

Full Stack Web Developer – EventifyPro   oct 2023 – nov 2023
Academic group experience. Henry Bootcamp

The EventifyPro application was created to facilitate the distribution and sell of various events (concerts, theater plays, musicals, etc). You can be a user who buys tickets or a organizer that wants to sell an event. As a member of the team, the most notable thing I did was:
- Significant contribution on CRUD operation and validations
- Organization and creation of global states for a consistent user experience.
- Create attractive designs in different components of the application.
- Design and implementation of an Event's Dashboard, as well of his forms.
- Debate on future goals, effective conflicts and version management in Git.

Front: HTML, TailwindCSS, Javascript, React.js, Material-UI, Next.js, Redux
Back: Node.js, Express
Database: PostgreSQL y Sequelize.

[Front-End Repository](#)

_____

Full Stack Web Developer – Drivers App   sep. 2023 - oct. 2023
Individual academic experience. Henry Bootcamp

The application focuses on manipulating data coming from a local API that stores information about Formula 1's drivers and others. During this project, I highlight:
- Efficient data storage from a local API to a database.
- Complete development of CRUD operations for drivers.
- Pagination to show around 512 drivers.
- Implementation of filters for personalized display of drivers allowing search by name, filters by team, sort alphabetically by name)
- Component design and stylization for an intuitive user's interface.

Front: HTML, CSS, Javascript, React.js, Vite.js, Redux
Back: Node.js, Express
Database: PostgreSQL y Sequelize.
